pūrtec EQi360 · CONNECTED INTELLIGENCE

TECHNOLOGY OVERVIEW · SPORTS TEAMS & VENUES

From RSA insight to connected intelligence

What your Risk Surveillance Assurance findings look like once EQi360 and NøDE are running in a team facility: every zone scored against the criteria your engagement set, live telemetry behind every score, and AI insight that shows your staff where to act first.

Illustrative concept. "Apex" is a fictional facility, and all values are examples, not client data. Numbered markers are explained overleaf.

READING THE ZONE VIEW

Every number on the screen traces back to your RSA engagement.

1 Live zone map

Every space your RSA engagement assessed becomes a live zone, from the locker room and showers to the training room, players' lounge and laundry. Color shows status at a glance.

2 Zone RSA index

The same index your engagement delivered, now updated continuously. Sub-indices show which domain is driving a score: biological signatures, ventilation, thermal conditions, response readiness or standards conformance.

3 AI insight

A plain-language read on what is driving risk in a zone, such as close-contact circulation, damp gear turnover or peak occupancy, and the operational levers that matter most.

4 Trend against your calendar

Scores plotted over the last ten days and tied to the team schedule, so post-practice peaks and game-day arrivals become patterns you can plan around.

5 The telemetry behind the score

Surface verification, CO_2 and crowding, air changes, humidity and turnaround times, each tracked against the targets agreed in your engagement.

Why it matters

An assessment tells you where you stood on the day. EQi360 keeps that picture current, so the improvements your RSA engagement recommended are monitored, acted on and verified every day of the season.

THE BRIDGE

How an RSA engagement becomes connected risk intelligence

01 · RSA ENGAGEMENT

Measure and set criteria

Specialists measure every zone in scope and agree the criteria and baselines that define "good" for your facility.

02 · NøDE

Instrument the right zones

NøDE sensors go into the highest-risk zones the engagement identified, with NøDE-Sport modules in team travel gear.

03 · EQi360

Score continuously

Every zone is scored around the clock against your RSA criteria, not a generic benchmark.

04 · AI INSIGHT

Prioritize the response

EQi360 explains what is driving a change and routes alerts to the person who owns the fix.

05 · VERIFY

Keep the record current

Closure is documented and re-measured, so your RSA evidence keeps building between examinations.

ONE PICTURE, EVERY ROLE

Built for the people who keep a team ready.

Sports medicine and athletic training

Live conditions in the spaces where players train, are taped and recover, with no extra rounds and no player health information required.

Equipment and team operations

Locker room, laundry and travel gear status before the team walks in, at home and on the road.

Venue operations and facilities

Alerts routed to the owner of the fix, verified closure and a clear view of maintenance and capital priorities.

Leadership and risk

One consistent, comparable view across every facility, with evidence that stands up with insurers and partners.

WHERE NØDE FITS IN A TEAM FACILITY

- Locker rooms and changing areas
- Shared showers
- Athletic training and taping
- Recovery and hydrotherapy
- Weight and conditioning rooms
- Players' lounge and shared spaces
- Laundry and equipment turnover
- Team travel gear, with NøDE-Sport

WHERE TO START

Most teams begin with an RSA engagement on one facility and one area, often the locker room complex or the training and recovery suite. EQi360 then carries those findings into daily operations. A one-hour working session is the easiest first step.
